DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1, 2, 6, 8, and 15 are rejected under 35 U.S.C. 102(b) as being anticipated by FR '194.

As seen in figures 1-4, FR '194 discloses a sealing cup with a u-shape having a static branch and lip 42, a dynamic branch and lip 41, and a core 43 forming a bead. A concave shape/reduced thickness is located opposite the bead in the region connecting the static branch to create a rotation area. The concave extends down to form another connection surface between the dynamic branch and the concave at the static branch. The internal and external faces of the lips form angles. And, the faces of the dynamic lip 41 converge toward one another due to the notches 44 and 45. The cup has a replenishment notch 49 at the core.

Allowable Subject Matter

3. Claims 3-5, 7, and 9-14 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Response to Arguments

4. Applicant's arguments filed 7-22-05 have been fully considered but they are not persuasive.

FR '194 (Swiss) discloses a notch at the connection between the core and static branch 42. The notch extends all the way to connection between the core and the dynamic branch. The notch (e.g. 45) provides mobility of the lips, and thus forms a rotation area (see pg. 1, lines 79-84 of Great Britain Patent 860,090 supplied by applicant on 7-22-05). In response to applicant's argument that the references fail to show certain features of applicant's invention, it is noted that the features upon which applicant relies (i.e., that the rotation area enables the whole formed by the stiffness area 29 and sealing lip 13 to be displaced) are not recited in the rejected claim(s). Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See *In re Van Geuns*, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993). The notch of FR '194 does create a rotation area that allows the lips to pivot. Also, FR '194 does teach replenishment and a replenishment notch 49. As seen in the equivalent patent GB '090, 49 permits fluid in the direction of 50 (see page 2, lines 2-13).
